Q-Pilot

Accelerate Quality with Generative AI

▶ **Watch Q-Pilot in action**

Beyond Automation

✓ Simplify quality management

✓ Minimize cost of manual work

✓ Enable accuracy and precision

Q-Pilot – named "Q" – is BPA Solutions' GenAI-powered quality assistant, specifically designed and trained to simplify your daily quality tasks, boost productivity and significantly improve business performance. This high-performing quality companion is now available for our end-to-end QMS solutions, BPAQuality365® and BPAMedical365®.

How does Q-Pilot work?

With Q, a true **game changer** for any organization, collaborators benefit from the ChatGPT experience when researching internal quality-related documents, data or procedures. Seamlessly integrated into your QMS platform, it allows your teams to retrieve accurate informative answers to successfully complete their daily tasks in no time. Additionally, users may prompt Q via Microsoft Teams through the available chatbot.

Helping you solve problems efficiently, Q collaborates with you and your team to easily find similarities or propose corrective actions based on previous events. Running on your Microsoft tenant, Q-Pilot is **highly secure**, naturally aligns with your corporate security guidelines and leverages the latest Microsoft technologies. You can configure it to exclusively run on your internal QMS data without the need to perform search on external Internet data. BPA Solutions' AI-powered eQMS drastically improves your business performance and continuously enhances the quality of your products and services.
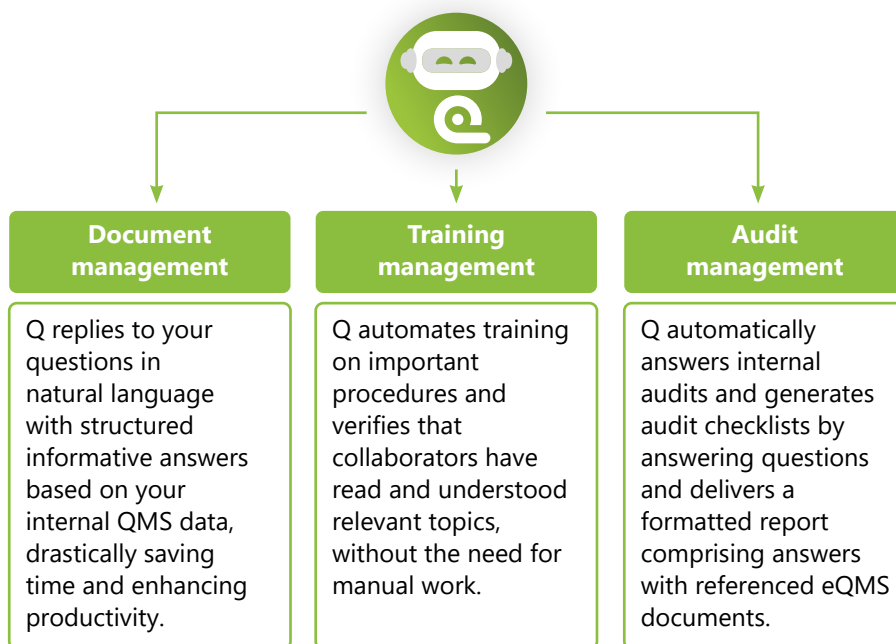

From quality compliance to quality performance

What can Q do for you?

There are countless use cases for the application of GenAI powered features into your quality management processes. Based on the feedback received from our customers and the input of quality experts across several markets, we have prioritized several business applications that will significantly boost your daily productivity while minimizing manual tasks.

By combining **robust power automation** with **advanced Generative AI**, Q solves complex business processes in minutes, helping organizations with preconfigured use cases. Of course, you may implement your own business cases should you have specific requirements.

Here is what your virtual quality assistant can do for you:

Document management	Training management	Audit management
Q replies to your questions in natural language with structured informative answers based on your internal QMS data, drastically saving time and enhancing productivity.	Q automates training on important procedures and verifies that collaborators have read and understood relevant topics, without the need for manual work.	Q automatically answers internal audits and generates audit checklists by answering questions and delivers a formatted report comprising answers with referenced eQMS documents.

Be up and running in no time

Our Professional Services team will have your new Quality Platform up and running in no time.

The **Quick Start Package** comprises of 80 hours:
- ✓ install our apps, automated workflows and AI services,
- ✓ transfer knowledge and train your power users on out of the box modules.

Requirements

- ✓ A subscription to BPAQuality365® or BPAMedical365® Premium Plan.
- ✓ Azure AI Search and OpenAI services up and running in your Azure environment – we assist your IT team in the setup of these services.
- ✓ Microsoft will directly charge you for the consumed AI services.
