

Q-Pilot Suite

One secure AI platform
for smarter Quality Management.

✓
Decrease training costs

✓
Minimize audit efforts

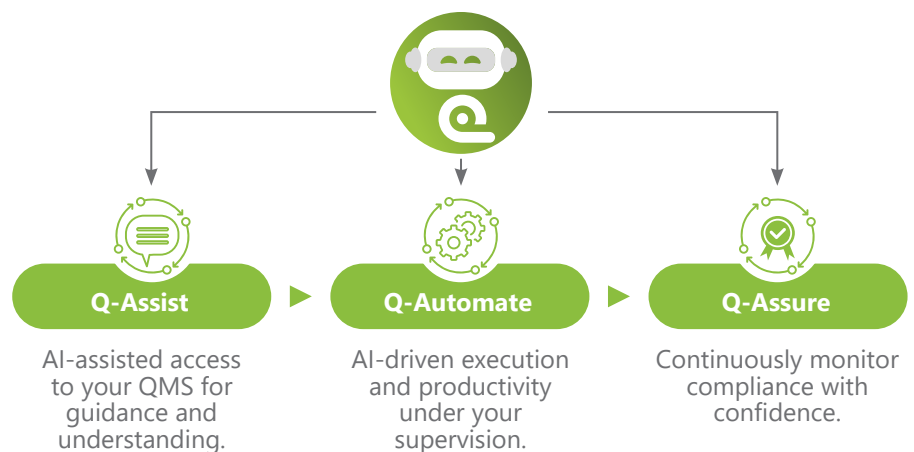

✓
Reduce compliance risks

Quality Management teams spend too much time searching for information, documenting activities, preparing audits, and maintaining compliance evidence. Q-Pilot changes this by embedding Generative AI directly into BPAQuality365® and BPAMedical365®.

Q-Pilot operates entirely within your Microsoft 365 tenant and works exclusively with your organization's-controlled quality information. Every answer remains traceable to its source, giving users confidence while maintaining governance and regulatory expectations. Each package builds on the previous one, allowing organizations to adopt AI at their own pace while continuously increasing value.

Watch Q-Pilot
in action

Q-Assist

Accelerate onboarding and knowledge sharing

Improve understanding of compliance requirements

Search index up to 2 indexes

Q-Assist provides a secure AI assistant for your BPA powered Quality Management System. Instead of navigating multiple documents, users simply ask questions in natural language through the BPA App or Microsoft Teams. Using semantic search, Q-Pilot understands the intent behind each question and retrieves precise, contextual answers directly from approved QMS content.

Natural language access

Semantic search
Conversational AI
Full traceability

Knowledge understanding

Summaries
Similarity search
Requirements explanation

Guided intelligence

Governed prompt libraries
AI-assisted drafting
Cross-module searches

Q-Automate

Reduce manual work across quality processes

Shorten audit preparation time

Search index up to 5 indexes

Q-Automate embeds AI directly into quality workflows to reduce repetitive manual effort while keeping users in control. Powered by Microsoft Power Automate, it combines AI with workflow automation to execute complex quality activities consistently and efficiently.

AI-driven document training

Fully automate training processes from questionnaires generation to training evidence recording

Audit evidence report

Generation of a structured report providing answers to audit questions with supporting evidence

Q-Assure

Strengthen compliance confidence

Support informed management decisions

Search index up to 10 indexes

Q-Assure extends automation into continuous compliance monitoring. It continuously consolidates quality information across the eQMS to help organizations understand their readiness, identify gaps early, and prepare for audits with confidence.

Compliance monitoring

Identify early indicators of compliance drift across CAPA, audits, risks, etc.

Governance control

Traceable outputs
Consistent information
Regulatory alignment

Audit readiness report

Overall QMS suitability
Adequacy, effectiveness and audit readiness assessment

Security by design

- ✓ Deployed within your M365 tenant for full data sovereignty
- ✓ Configurable AI indexes controlling accessible information
- ✓ Internal work mode by default, with optional web mode if enabled by the customer

AI with governance

- ✓ Q-Pilot Suite is designed to support, not replace.
- ✓ It provides guidance and generates traceable answers leveraging approved QMS content.
- ✓ Responsibility and decisions always remain with the user.

Requirements

- ✓ A subscription to BPA.
- ✓ Azure AI Search and OpenAI services up and running in your Azure environment (we assist your IT team in their setup).
- ✓ Microsoft will directly charge you for the AI services consumed.
